

ABSTRACT

An electronic device (A1) is a liquid crystal display incorporated in a mobile phone, for example. The electronic
5 device (A1) an IC chip (3) mounted on the rear surface of a base plate (1A), and a light shielding tape (41) for preventing incidence of light to the IC chip (3). The light shielding tape (41) is provided with an indication of information (51) regarding the electronic device (A1). The information (51)
10 is a lot number of the electronic device (A1), for example. Thus, the light shielding tape (41) has two functions, i.e. a light shielding function and an information displaying function.
